Q1. Top 5 popular movies SQL Solved

Using hints except Complete Solution is Penalty free now Use Hint

Context:
Acme Studios, a major Hollywood production company, maintains a vast movie database. This database tracks information about movies they've produced, including titles, directors, taglines, and a popularity metric. Understanding movie popularity is crucial for Acme Studios to identify audience preferences and make informed decisions about future productions. By analyzing the most popular movies, streaming services can refine their recommendations and negotiate better content deals.
Problem Statement:
To gain insights into audience tastes, Acme Studios wants to identify the most popular movies in their database. This can be achieved by analyzing the "popularity" field within the "movies" table.
Write a query to find the movie titles, taglines, and directors for the **top 5 popular movies**.
Result:
Return the columns '**original_title**', '**tagline**', and '**director**'.
Dataset description for movies table:
1) id - tmdb movie id
2) imdb_id - imdb movie id
3) popularity -A numeric quantity specifying the movie's popularity.
4) budget -The budget in which the movie was made.
5) revenue - The worldwide revenue generated by the movie.
6) original_title- The title of the movie
7) cast - The name of the lead and supporting actors.
8) homepage - A link to the homepage of the movie.
9) director - The name of the director of the movie
10) tagline - Movie's tagline.
11) keywords -The keywords or tags related to the movie.
12) overview -A brief description of the movie.
13) runtime -The running time of the movie in minutes.
14) genres -The genres of the movies
15) production_companies-The production house of the movie.
16) release_date -the date on which it was released.
17) vote_count -the count of votes received.
18) vote_average - average ratings the movie received.
19) release_year - the year on which it was released.
Sample Input:
Table: movies

id	original_title	tagline	director	popularity
135397	Jurassic World	The park is open.	Colin Trevorrow	32.985763
76341	Mad Max: Fury Road	What a Lovely Day.	George Miller	28.419936
262500	Insurgent	One Choice Can De...	Robert Schwen...	13.112507

MySQL (MySQL 8.0)

```
/* YOUR QUERY GOES HERE
   Example: SELECT * FROM movies;
*/
select original_title,tagline,director
from movies
order by popularity desc
limit 5;
```

Q2. Low Fat & Recyclable Products SQL Solved

Using hints except Complete Solution is Penalty free now Use Hint

Problem Statement:
Write a query to find the ids of products that are both **low-fat and recyclable**.

- Return the result table ordered by `product_id` in ascending order.

Table: `products`

Column Name	Type
product_id	INT
low_fats	VARCHAR
recyclable	VARCHAR

Sample Input:
Table: `products`

product_id	low_fats	recyclable
0	Y	N
1	Y	Y
2	N	Y
3	Y	Y
4	N	N

Sample output:

product_id
1
3

Explanation:
Only products 1 and 3 are both low-fat and recyclable.

MySQL (MySQL 8.0)

```
/* YOUR QUERY GOES HERE
   Example: SELECT * FROM products;
*/
select product_id from products
where low_fats = 'Y' and recyclable = 'Y'
order by product_id;
```

Q3. Germany SQL Solved

Using hints except Complete Solution is Penalty free now Use Hint

Problem Statement:
Write a query to fetch customer details like customerName, phone, addressLine1, city, state, and postalCode who are not from **Germany**.

- Return the result ordered by **customerName** in ascending order.

Table: customers

Column Name	Type
customerNumber	INT
customerName	VARCHAR
contactLastName	VARCHAR
contactFirstName	VARCHAR
phone	VARCHAR
addressLine1	VARCHAR
addressLine2	VARCHAR
city	VARCHAR
state	VARCHAR
postalCode	VARCHAR
country	VARCHAR
salesRepEmployeeNumber	INT
creditLimit	FLOAT

Sample Input:
Table: customers

customerNumber	customerName	contactLastName	contactFirstName	phone	addressLine1	addressLine2	city	state	postalCode	country	salesRepEmployeeNumber	creditLimit
128	Blauer See Auto...	Keitel	Roland	+49 69...	Lyonerstr. 34	NULL	Frankfurt	NULL	60528	Germany	1504	59700.00
223	Natürlich Autos	Kloss	Horst	0372-55...	Tauchenstraß...	NULL	Cunewalde	NULL	01307	Germany	NULL	0.00
385	Cruz & Sons Co.	Cruz	Arnold	+63 2 5...	15 McCallum...	NaNWest Centre...	Makati City	NULL	1227 MM	Philippines	1621	81500.00

481	Raanan Stores,...	Altagar,G M	Raanan	+ 972 9...	3 Hagalim Blv.	NULL	Herzlia	NULL	47625	Israel	NULL	0.00

Sample output:

customerName	phone	addressLine1	city	state	postalCode
Cruz & Sons Co.	+63 2 555 3587	15 McCallum Street	Makati City	NULL	1227 MM
Kremlin Collectables, Co.	+7 812 293 0521	2 Pobedy Square	Saint Petersburg	NULL	196143
Raanan Stores, Inc	+ 972 9 959 8555	3 Hagalim Blv.	Herzlia	NULL	47625

MySQL (MySQL 8.0)

```
/* YOUR QUERY GOES HERE
   Example: SELECT * FROM customers;
*/
select customerName, phone,addressLine1,city,state,postalCode
from customers
where country<>'Germany'
order by customerName;
```

Q4. Patients With a Condition SQL Solved

Using hints except Complete Solution is Penalty free now Use Hint

Write an SQL query to report the **patient_id** who have Type I Diabetes.
Patients with Type I Diabetes will have **"DIAB1"** as prefix in any of the words in the conditions data.
For example :

```
- Patient with conditions such as "DIAB100 ACNE FEVER" , "ACNE DIAB100 FEVER" are Type
1 Diabetic
- Patient with conditions such as "ACNEDIAB100 FEVER" , "ACNE FEVER" are not Type 1
Diabetic
```

Return the results ordered by **patient_id** in **ascending order.**
Table: patients

Column Name	Type
patient_id	int
patient_name	varchar
conditions	varchar

Sample Input:
Table: patients

patient_id	patient_name	conditions
10	Sam	ACNE DIAB100
11	Halette	YFEV COUGH
12	Alfreds	DIAB100 MYOP

Sample Output:

patient_id
10
12

Explanation: Patients with id 10 and 12 have Type I Diabetes as conditions have words having 'DIAB1' as prefix

MySQL (MySQL 5.6)

```
/* YOUR QUERY GOES HERE
   Example: SELECT * FROM EMPLOYEE;
*/
select patient_id
from patients
where conditions like 'DIAB1%' or conditions like '% DIAB1%'
order by patient_id;
```

Q5. 2012-2015 SQL Solved

Using hints except Complete Solution is Penalty free now Use Hint

Problem Statement:
Find the details of the movies that are released **between** the years **2012-2015** i.e., (Including 2012 and 2015).

- Return the columns '**original_title**', '**genres**', '**vote_average**', and '**revenue**'.
- Return the result ordered by **original_title** in ascending order.

Dataset description for `movies` table:
1) id - tmdb movie id
2) imdb_id - imdb movie id
3) popularity -A numeric quantity specifying the movie's popularity.
4) budget -The budget in which the movie was made.
5) revenue - The worldwide revenue generated by the movie.
6) original_title- The title of the movie
7) cast - The name of the lead and supporting actors.
8) homepage - A link to the homepage of the movie.
9) director - The name of the director of the movie
10) tagline - Movie's tagline.
11) keywords -The keywords or tags related to the movie.
12) overview -A brief description of the movie.
13) runtime -The running time of the movie in minutes.
14) genres -The genres of the movies
15) production_companies-The production house of the movie.
16) release_date -the date on which it was released.
17) vote_count -the count of votes received.
18) vote_average - average ratings the movie received.
19) release_year - the year on which it was released.

Sample Input:
Table: movies

id	imdb_id	popularity	budget	revenue	original_title	cast	homepage	director	tagline	keywords	overview	runtime	genres	production_companies	release_date	vote_count	vote_average	release_year	budget_adj	revenue_adj

Q6. Olympic Table SQL Solved

Using hints except Complete Solution is Penalty free now Use Hint

Context:
The Olympic Games are a major international multi-sport event where athletes from various countries compete for medals in different sports. The performance of each country is often evaluated based on the total number of medals won.

Problem Statement:
In the context of managing data for an Olympic event, you are tasked with sorting a table of countries based on their medal counts. The goal is to determine the ranking of countries by their performance in the Olympics, prioritizing **gold**, **silver**, and **bronze** medals, respectively.
Write an SQL query that sorts the `olympic` table according to the following rules:

- The country with more gold medals should come first.
- If there is a tie in the no. of gold medals, the country with more silver medals should come first.
- If there is a tie in the no. of silver medals, the country with more bronze medals should come first.
- If there is a tie in the no. of bronze medals as well, then the countries with the tie are sorted in ascending order lexicographically.

Table: `olympic`

Column Name	Type
country	VARCHAR
gold_medals	INT
silver_medals	INT
bronze_medals	INT

Sample Input:
Table: `olympic`

country	gold_medals	silver_medals	bronze_medals
China	10	10	20
South Sudan	0	0	1
USA	10	10	20
Israel	2	2	3
Egypt	2	2	2

Sample Output:

country	gold_medals	silver_medals	bronze_medals
China	10	10	20
USA	10	10	20
Israel	2	2	3
Egypt	2	2	2
South Sudan	0	0	1

MySQL (MySQL 8.0)

```
/* YOUR QUERY GOES HERE
   Example: SELECT * FROM olympic;
*/
select * from olympic
order by gold_medals desc,silver_medals desc ,bronze_medals desc,country asc;
```

Q7. Keywords SQL Solved

Using hints except Complete Solution is Penalty free now Use Hint

Context:
Acme Studios, a major Hollywood production company, maintains a vast movie database that tracks detailed information about their films, including genres, keywords, and cast. Understanding audience preferences for specific movie categories is crucial for informing production decisions and marketing strategies.
You are a data analyst at Acme Studios. Your manager has asked you to compile a list of all movies that contain the keywords 'sport', 'sequel', or 'suspense'. This data will be used to tailor marketing strategies and recommend relevant content to viewers.

Problem Statement:
Write a query to list down all the movies along with their details that have **keywords** like `'sport'` or `'sequel'` or `'suspense'`.

Result:
1. Return the columns '**original_title**', '**director**', '**genres**', '**cast**', '**budget**', '**revenue**', '**runtime**', and '**vote_average**'.
2. Return the columns ordered by **original_title** in ascending order.

Dataset description for 'movies' table:
1. id - tmdb movie id
2. imdb_id - imdb movie id
3. popularity - A numeric quantity specifying the movie popularity.
4. budget - The budget in which the movie was made.
5. revenue - The worldwide revenue generated by the movie.
6. original_title - The title of the movie
7. cast - The name of the lead and supporting actors.
8. homepage - A link to the homepage of the movie.
9. director - The name of the director of the movie
10. tagline - Movie tagline.
11. keywords - The keywords or tags related to the movie.
12. overview - A brief description of the movie.
13. runtime - The running time of the movie in minutes.
14. genres - The genres of the movies
15. production_companies - The production house of the movie.
16. release_date - the date on which it was released.
17. vote_count - the count of votes received.
18. vote_average - average ratings the movie received.
19. release_year - the year in which it was released.

Sample Input:
Table: movies

id	original_title	keywords	director	genres	cast	budget	revenue	runtime	vote_average

MySQL (MySQL 8.0)

```
/* YOUR QUERY GOES HERE
   Example: SELECT * FROM movies;
*/
select original_title,director,genres,cast,budget,revenue,runtime,vote_average
from movies
where keywords like '%sport%' or keywords like '%suspense%' or keywords like '%sequel%'
order by original_title;
```

Q8. Article Views 1 SQL Solved

Using hints except Complete Solution is Penalty free now Use Hint

Write an SQL query to find all the authors that viewed at **least one** of their own articles.
Return the result table **sorted by id in ascending order**.

Table: views

Column Name	Type
article_id	int
author_id	int
viewer_id	int
view_date	date

Sample Input:
Table: views

	article_id INT	author_id INT	viewer_id INT	view_date DATE
1	103	106	106	2022-05-18
2	102	107	107	2022-06-17
3	101	104	105	2022-09-22
4	101	104	105	2022-09-16
5	101	106	103	2022-10-11
6	102	106	103	2022-03-14
7	101	104	103	2022-07-16

Sample Output:

id
106
107

MySQL (MySQL 5.6)

```
/* YOUR QUERY GOES HERE
   Example: SELECT * FROM EMPLOYEE;
*/
select author_id as id from views
where author_id = viewer_id
order by author_id;
```

Q9. CRUD - 1 Solved

Given the SQL query:

```
UPDATE employees SET salary = salary * 1.1 WHERE department = 'Sales';
```

What does this query do?

Choose the correct answer from below:

- Increases the salary of all employees by 10%.
- Increases the salary of employees in the 'Sales' department by 10%.
- Updates the department to 'Sales' for all employees.
- Deletes employees in the 'Sales' department.

Feel Free to submit your answer. Your score will only be calculated based on the best of your 2 attempts

Q10. CRUD - 2 Solved

Which SQL operation explicitly mentions the **reset of the primary key** of a table?

Choose the correct answer from below:

- DELETE
- TRUNCATE
- DROP
- All of the above

Feel Free to submit your answer. Your score will only be calculated based on the best of your 2 attempts
